

Universal Email, Voice, Twitter, Social Network Dashboard and Inbox Beta Unveiled *Introducing Rocketvox Beta, one place for all communications*

PALO ALTO, Calif.--(Business Wire)--Rocket Technology Labs, developer of the Rocketvox unified communications platform, announced today the release of Rocketvox Beta, available by request at www.rocketvox.com. Rocketvox provides oneplace to view and securely manage all of your communications streams with channels for any POP or IMAP email, VoIP, voicemail, visual voicemail, voicemail-to-text, Twitter, and Facebook accounts. Rocketvox Beta also provides a cross channel address book to support the wide variety of ways we communicate on the Internet and on our mobile devices.

Rocketvox Beta's simple, graphically beautiful user interface is being released as an Adobe AIR application that runs on Mac OS, Windows, or Linux. To deliver best-in-class voice applications, Rocket Technology Labs has partnered with VoIP and voicemail providers, Ribbit and PhoneTag, both of whom provide market-leading platforms. Rocket Technology Labs provides absolute security, confidentiality, and privacy for all user data and communication streams by building powerful ncrption, back up, and non-repudiation into Rocketvox Beta.

Rocket Technology Labs will continually be engineering new functionality as well as new platforms to add to Rocketvox Beta's core features and partnering with top providers of communications services and hardware to deliver communication tools in step with the evolving ways people interact across the Internet and mobile devices.
